Patient+ ON Practice Device or Patient Personal Device Frequently Asked Questions

#	Questions	Responses
1.	If the patient does not have a mobile phone, can they still complete questionnaires?	Yes, they can use the Practice's Touch Screen Devices.
2.	What do the patient need to do to complete these digital forms?	Patients need to add their own name surname and data of birth as in the patient registration at the practice to open the digital questionnaires. The intuitive screen has simple instructions for them to follow and respond by simple taps on the relevant buttons.
3.	What will happen if a Patient has the same name and D.O.B as another patient?	For such duplicate records the patient will be asked for their Postcode, and if that does not match or is duplicate then a pop-up notice will refer the patient back to the Receptionist.
4.	Does the Patient need to complete these forms on one go?	Preferred, prior to the consultation. However, they are allowed to login again to respond to questionnaires if they have multiple questionnaires assigned
5.	Will anybody else see what the Patient has done?	No, only the Practice Users of the EMIS web system will be able to view information uploaded to the clinical system.
6.	Will the patient have to complete these forms every time they go to their Practice?	Patients only have to respond to a questionnaire if assigned by a Clinician. For mandatory questionnaires, like a feedback form, the patients won't view these once responded until the practice decides to put it up again. For instance, practices might decide every year to do a patient feedback, or every 2 years do a demographics information. According to the practices chosen time the questionnaires will be shown to the patients.
7.	Will the Clinicians see what the patient has inputted prior to their appointment?	All Data captured are uploaded in real time. Hence, whenever the patient completes the questionnaire, it will appear on the patient screen in seconds.

8.	Can the Patient do this at their own home?	No, this has to be done within the Practices secured network connection due to the security and confidentiality of patients' clinical data.	
9.	What will happen if the Patient only complete half the form?	If they have completed half the form before the consultation and not submitted, they will be able to login again before leaving the premises to complete the remainder of the respective form. However, if they have submitted the form it will not be available any more. PLEASE NOTE: the patient will need to complete the form on the same day same session that they are visiting the practice. The incomplete form will only be available to them for a short period of time only.	
10.	What is a QR Code? Who sets them and when?	A QR Code is a scannable image that allows a smart mobile device to have secure access to the Patient+. The installation session will cover that at the time of installation.	
11.	Why do they have to use two QR codes to enter the Patient+ application?	This is to ensure the security of the clinical system and the confidentiality of the clinical data.	
12.	Can the patients complete the questions once they go out of the practice premises?	Due to security governance issues patients can only use Patient+ while they are within the practice premises.	
13.	Can we use Patient+ if our practice does not have patient wifi?	Yes, patients can either use the Practice device which will be connected internally or with their own mobile devices via the scanning of the two QR codes. The Patient wifi does not play a part in this data capturing system, so does not matter if the practice offers it or not	
14.	Can the patient use the clinical system wifi for personal use If they scan these QR codes?	No, they are not allowed to access anything else apart from the Patient+ application.	
15.	Does the practice need to spend time on managing the QR codes or patient entries?	Any practice user can set the questionnaires by following the simple guidelines which are provided by SymmlConnect. Once set, the practice does not need to interfere with the QR codes or the patient devices.
